Non volatile audit to 10 million targets for each trap.
Stuck Button detection.
Secure and fraud proof.

More detail...

Maximise your capabilities and Co-Site Skeet and Trap fields, letting your customers decide what they shoot.

Skeet Shooters use the Skeet handset; Trap shooters use the Acoustic System.
Dedicated Canterbury Voice Release interface available as a one for one Power Supply swap out.
'Bypass Plug' removes Claymate completely leaving the Acoustic System perfectly operational.

Single button handsets are available for dedicated, Non Overlaid, Trap disciplines.
Almost any Special Build Option can be considered.

Credit feature allows groups of shooters with their own counters to pay for their own targets.
Once targets have been credited, the Counter can be removed and Claymate will release targets until the cache is empty.

Ground selectable target options include...

- Allow up to 3 'No Birds' to be added for every 25 targets credited.
- Select English or 'ISU' Skeet.
- Select Trap or ATA Doubles (DTL & Double Rise) Target Counting

Without a valid counter, the Claymate cannot launch targets yet it remains 'active' to button presses and will even detect stuck buttons and issue a distinctive warning.

This new All-In-One Claymate does away with overlay boxes and the associated wiring issues.
Simple plug and Socket connections make installation as simple as it can be.
