Claymate **Super Junior (Radio) Claymate**

For one or two (3) traps.

Main Features

The rule is... If it is not an improvement, don't compete.

With proven 'RF Solutions' Technology, The Super Junior (Radio) Claymate *is* an improvement.

The Radio Claymate, with just one receiver, can operate 1, 2 or even 3 traps offering considerable "value adds" over any other Radio product.

Solo Delay OFF...

Button A gives you trap A, likewise trap B and Pairs... Easy.

Pressing A and then B gives a following pair... Simple.

Press and HOLD A or B for more than 2 seconds to fire the other trap when you release the button... Neat twist.

Holding any button for more than 8 seconds will sound the 'Stuck Button' warning without upsetting the release of the alternate target if such a long delay is required.

Solo Delay ON...

Any button releases a target after a 3 second countdown.

Pressing PAIR during the countdown cancels the launch.

Press A or B during the countdown and a following pair comprising the first button and the last button are sent.

Solo Delay on/Off.

Pressing A and B together toggles the Solo Delay On or Off.

More detail...

The Super Junior (Radio) is shown above with one receiver. The Transmitter is shown without the protective orange boot supplied as standard.

Additional receivers allow for distant placement of traps but up to 3 traps can be switched from just one receiver. Trap 'C' fires when any other trap is sent, or use Trap 'C' for a single trap.

After 5 minutes of inactivity, the System goes to sleep... No need to remember to switch it off.

The radio link uses tried and tested 'RF Solutions' radio modules mated with Claymate expertise.

Custom Software...

BLN has supplied custom software to other equipment manufacturers to provide, in one case, a single trap control with radio control of an oscillating base.

Another custom commission was 'Fire' & 'No Bird' control of a Multitrap Claymate for 5-Stand.

BLN Technical Services specialises in bespoke Electronics and Software.
